A Green Smart Reflectionary Token

TRII Token wants to make the world a better place to stay.

Our goal is to reward TRII Token holders to encourage cryptocurrency investors to support the innovative SES EU concept, which is an aggregation of sustainable solutions unified to decentralize energy resources.

TRII Token INTRODUCTION

With TRII Token , we want to encourage investors to support our unique environmental project SES EU. We have worked hard to create an innovative reflectionary token using a highly secure and intelligent Smart Contract not only to prevent price manipulations but also to guarantee a natural price growth. This project focuses on transparency as a basis for business operations, whether with investors or with crypto platforms such as Exchanges, Crypto Media and Coin-Tracking Platforms.

WHO WE ARE?

We are two teams located in two different countries.

The first team is a part of a moroccan company which has its HQ in Casablanca.

The second team is built by a small group of freelancers in Germany.

Our leadership leaded well known companies in Germany : goetel GmbH, Komnexx GmbH, Ruhe Agrar GmbH, inexio Breitband GmbH and more other companies.

WHAT WE DO?

We are working hard to engage in sustainable environmental projects that combines the requirement of sustainable energy and the autonomy of its resources, that's why we developed SES EU as an infrastructural design to achieve a decentralized energetic solutions. SES EU concept is an aggregation of many sustainable projects like photovoltaic technologies, bio-gas gained from recycled waste, district heating, wind energy, emissions free architectural buildings...etc

ABOUT SES EU

Energy is the engine of everything in this universe. Obtaining energy requires tremendous efforts. The access to traditional energy sources where geography plays a major role turns obtaining it increasingly complex. Concluding agreements with countries that possess these resources is not easy, because the political fluctuations play also a major role in obtaining shares of these resources.

We have thought clearly about the SES EU concept to obtain energy in a sustainable, decentralized manner and based on resources from the green world taking advantage of the impermeable energy including wind, solar, and even from recycling biological waste.

SUSTAINABLE EXTENDED SOLUTIONS

GAS PLANTS

Obtaining the approval for gas plants constructions from the municipalities is not easy, so we will have to buy existing green gas plants and adopt them to the SES EU Concept in case we cannot build new ones due to the presence of old plants by that we do not have occupy more surface from the mother nature.

SOLAR ENERGY

Our partnership with VIVA energie GmbH has shown to us that there still a lot to do in the photovoltaics market. Also, NOOR project in Morocco inspired us to do not focus only on photovoltaics technology but also sunlight concentration.

GREEN HYDROGEN

By virtue of the presence of our headquarters in Morocco, we would like to enter the field of green gas production from its wide door, and since Morocco is a gateway to Africa towards Europe, we want to make this project an intercontinental energetic bridge that combines the two continents.

GREEN ARCHITECTURE

Architecture is also a zone that we want to include to the unified sustainable construct. In municipalities or the edges of cities, we want to attach all our sustainable services to environment-friendly housing complexes that will save space and adopt all our services to reach near to Zero emission mark. In the first phase we will focus on student complexes before generalizing designs by working bilaterally with the municipalities.

DISTRICT HEATING

Due to our long experience in this field, we thought of innovating infrastructural projects in different branches and transforming it into a unified and renewable building. We have a long experience in building green gas plants, here we thought of making the generation of green gas includes providing homes with hot water that results from cooling the engines that burn natural gas coming from green gas farms to generate electricity. This will enable residents to benefit from the heat exchange features whether heating homes or water at a low price compared to shale gas, the homes will not need any machines or technologies that occupy a significant area of the total space.

This will eliminate the manufacturing of these machines and equipment, as well as the complexity and maintenance costs they cause.

Do not forget that this equipment causes a significant pollution of our planet in its production, transportation and even disposal.

INTERNET ACCESS

In SES EU design, we also thought about monitoring the technical part of our services, as example the counters in the households who are going to benefit from our services. Here we plan to put optical fibers in the drilling stage while we distribute heating pipes to homes.

In this way, the counters are going to have a connectivity to Datacenters to transmit data to us about the state or usability of the network. Its not limited to this only, but we also thought of creating an internet supply providing the subscribers of heating services with internet access through the same optical fiber attached to the consumption counters.

CHARGING STATIONS

The movement from fuel to EV encourage us to think about charging technologies where a lot of improvements are needed. We want to work with the support of EU governments to gain licenses to build charging stations in households as well as outside.

MARKETING STRATEGIES

TRII Token Marketing strategies are running from different angles using different tools to drive interest in our project, to allow crypto investors to engage with our project and, eventually, invest in TRII Token. The main goal of marketing is to make sure that investors purchase TRII Token naturally and trade or hold it wisely to generate a passive income and to give us the financial support to realize sustainable projects to make our planet, a better place to stay.

MARKETING SUMMARY

We must follow some Marketing activities to promote TRII Token to the target market. The first one is to get the attention of the investors to build a community.

Social media can keep us close to the community while we release news and updates for the project. That can help us to maintain a good communication with the community and encourage the members to share the project.

We also count on SEO and Analytics as a combination to rank high in search engines and keep eyes on our marketing strategies results.

COMMUNITY

The most effective part here is to gain audiences increasingly to support TRII Token and build a strong community. We think we add more trust to the project with the innovative Smart Contract that focuses on transparency, natural growth and also, the reflection of the TRII Token to reward investors.

SOCIAL MEDIA

With social media, we want to keep the community members up to date by providing additional information. With Multi-Platform articles, we want to reach an excellent communication level inside the community and give good reasons to share TRII Token articles to make the community the key to its growth.

- ✓ Natural Growth
- ✓ Trust
- ✓ Transparency
- ✓ Rewards

- ✓ News and Updates
- ✓ Excellent Communication
- ✓ Multi-Platform Articles
- ✓ Community Growth

ANALYTICS & SEO

We use Web Analytics as a measurement utility to track the results from marketing campaigns. We also use keyword optimization posting news articles not only on social media but also on the website using SEO to rank higher in search engines.

- ✓ Web Analytics
- ✓ SEO
- ✓ Results Tracking
- ✓ Rank High

“
WE WANT TO MAKE THE WORLD
A BETTER PLACE TO STAY
”

SOLUTION SUMMARY

TRII Token reflection uses mechanisms in an innovative Smart Contract that automatically distribute tokens across holders' wallets and liquidity pools. BSC technology makes the process instant, transparent, and public.

No Burn

Burning will never take place in this project, because if burning indicates something, it indicates manipulation of the price, which drags investors towards greed and its profit is not guaranteed.

No Stacking

Staking assets do not pay out staking rewards daily. As a result, stakers have to wait to receive their rewards. With TRII Token get instant rewards mitigating the risks of stacking.

TARGET MARKET

- Wide margin generations
- Short-term investors.
- Long-term investors.
- Blockchain technologies investors.
- Sustainable projects investors.
- Investors looking for a passive income.

Transparency is the biggest key to gain confidence as it makes marketing the project easier and intuitive. We have registered and signed addresses that bring investors closer to the project's revenues and trends.

Marketing

The assets of this signed the address will be stocked as a support for the TRII Token to cover the marketing expenses in a transparent manner where anyone can view them.

Team

The assets of this signed address will be used to cover the expenses of the project. These incomes are available to the public in a transparent manner where anyone can view them.

Business

the assets of this signed address will realize the SES EU concept. These assets are available to the public in a transparent manner and anyone can view them.

TOKENOMICS

TRII Token has many built-in features to offer amazing functions to stabilize the price, offer a transparent market capital report, reward investors and to provide liquidity automatically.

TAXATION

LIQUIDITY

TRII Token investors play a major role providing liquidity.

TEAM SUPPORT

Investors help us to cover TRII Token project charges by paying fees to the Team.

BUSINESS DEVELOPMENT

Every investor helps to realize SES EU concept by paying a small Business Development fee.

MARKETING

Every investor helps to market TRII Token by paying a small marketing fee.

REWARD HOLDERS

Get rewarded just for holding TRII Token in your wallet.

Back to liquidity pool 3%

Business Development: 2%

Team: 2%

Marketing 2%

Back to holders 1%

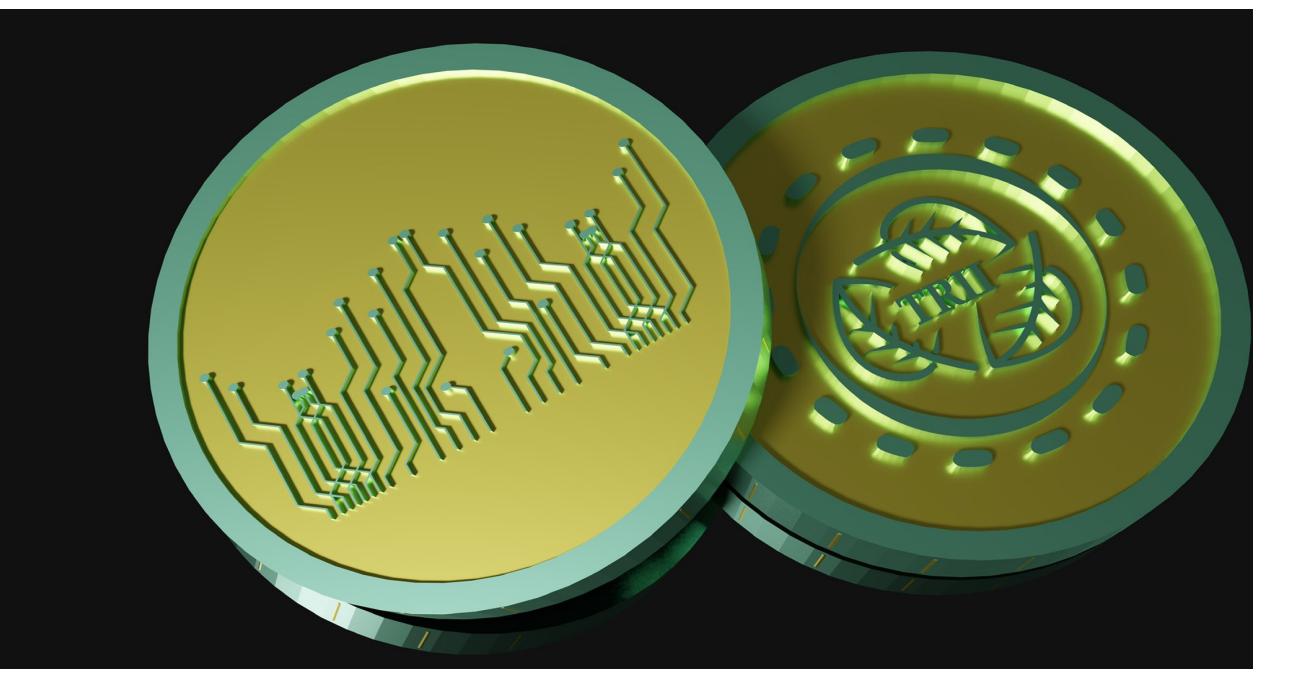

OUR LEADERSHIP

YOUSSEF TRII

CEO & Founder

According to my experience in the information technology, the infrastructure for sustainable energy and telecommunication in many companies. I believe that we do not need to change the world. It can be enough to change our behavior to add a new fingerprint that protects our environment and the environment of future generations. With the TRII Token project we would like to connect Blockchain to the green world.

SILAS BITTMANN

Business Consulting

Father of two children and I care about their and our future. Therefore, I would like to contribute to the sustainable energy supply with my company VIVA energie GmbH and promote climate protection. Am happy to be a business consultant for TRII Token and to have the opportunity to assign my knowledge to this project.

Pre-Sale Participation

For Pre-Sale we have two convenient payment systems.

The first system is centralized and is mainly based on PayPal services.

The second system is a decentralized payment system based on BUSD payments.

All the received fund in Pre-Sale stage is going to be locked as liquidity for two years in DEXs.

Paypal Payment

INVEST
In TRII Token

The weight of the project is embodied in its objectives and the clear vision for a sustainable future.
We welcome all investors who share the same vision and put confidence in the project by
supporting it and playing the main role in its success.

BUSD Payment

■ Marketing Address

Please copy TRII Marketing address from the link bellow:

<https://bscscan.com/address/0x17bed6a3ad90797753500a3f7e7fc3e42128eb51>

■ Send BUSD

Please send BUSD to TRII Marketing address from the wallet
where you want to hold TRII Token in.

■ Receive TRII Token

We are going to send TRII Token to the wallet we received BUSD from.
We have limited human resources, so please be patient.

■ Import TRII Token

Import TRII Token using the informations below:

Address: 0x0952b2b84342390E565Ff5463e6A49302d6e0E78

Decimals: 9

Name: TRII

Pancakeswap 2022-2023

At a Pre-Sale revenue of 200k BUSD we are going to
lock 1 Billion TRII Token in Pancakeswap.

Gate.io 2022-2023

We did request a listing in Gate.io but we still waiting
for approval.

Security FEATURES

TRII Token is the next Generation of a reflection token on the Binance Smart Chain (BSC). We have made great efforts to ensure the security of investors, making the TRII Token impossible to manipulate, not only by imposing tax fees that benefit the project and the investors, but also developed mechanisms and integrated them in the Smart Contract. These mechanisms automatically detect bots and prevent them from manipulating transactions by jumping over or under investors while buying or selling TRII Token. We have done research with various known methods to detect vulnerabilities in the smart contract and added to this a manual lookup based on teamwork that brings together two teams specialized in cybersecurity in the blockchain networks. We have prepared a detailed report and it is available for all to peruse.

Antibot

BAN ROBOTS

Stops all bot wallets from interacting with the smart contract. To enforce fair and natural interactions.

No Minting

STATIC SUPPLY

No creation of a specified number of tokens and adds it to the total supply. We think running after an increasing total supply is ugly!

No Lock

DECENTRALIZATION

No stops or locks for function modules of the smart contract.

“
WE DONT
LIKE WHALES
AND BOTS
”

**Grow Up TRII Token naturally With Our
Inovative Smart Contract**

Because we don't like whales nor bots, we have developed mechanisms in the smart contract to protect you and us from market greed that many have been offended by.

Max Wallet

NO WHALES

a non-whitelisted wallet can only hold a specified number of TRII Token.

Max Transaction

FOR FAIR TRADING

A non-whitelisted wallet can transfer 0.2% of the TRII Token total supply. A good example for a whitelisted wallet is an Exchange Hot Wallet.

Blacklist

BAN SUSPECTIOUS ACTIVITIES

Stops malicious wallets from interacting with the smart contract function modules. This function was built to protect TRII Token Community.

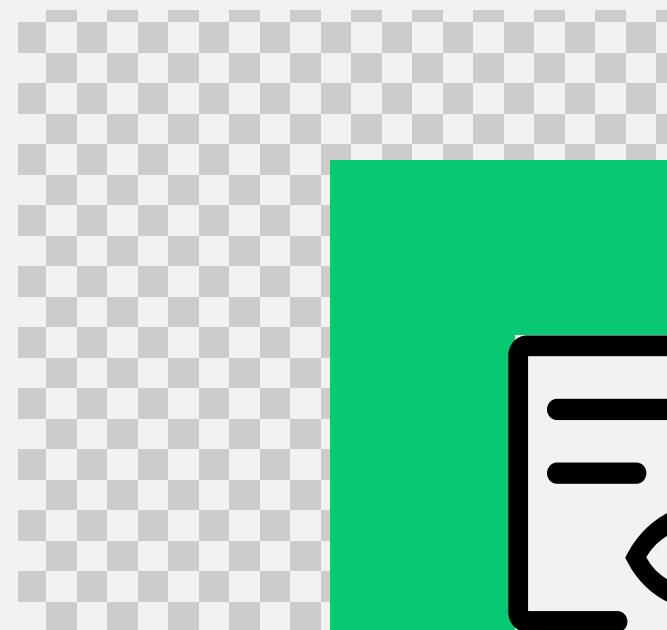

CoolDown Timer

FOR FAIR TRADING

Functionality to limit the number of transactions that a wallet can make within a 24-hour span.

Security Audit

We have used the tools available in the field of automatic vulnerability scanning against TRII Token Smart Contract and added on top of this a multi-party manual search to make the Smart Contract adopt a the highest security level.

Manual Auditing

The search for loopholes and wrong settings in the Smart Contract was carried out in coordination with the German and Moroccan teams and was performed as a line-by-line manual analysis.
